

PROJECT 2

Your submission should include:

Section 1 – Setup Amazon Q Business

The screenshot shows the Amazon Q Business console. At the top, there's a navigation bar with the AWS logo, a search bar, and account information (United States (Oregon), Account ID: 8530-9192-4250). The main header indicates 'Amazon Q Business > Applications'. A blue banner states: 'Q Business applications may securely transmit data across Regions within your geography for processing. For more information, access Amazon Q Business Documentation'. Below this, a section titled 'How it works' features three cards: 'Create generative AI application' (Name your application, grant access, and experience how Q can accelerate your team's productivity), 'Enhance application - optional' (Connect to data sources, configure guardrails, plugins, Q App controls, and more), and 'Customize web experience - optional' (Customize the end-user web experience and verify readiness to share). The 'Applications (1)' section shows a table with one application: 'CareerCoachAssistant'. The table columns are Name, Application type, Index type, Index name, Creation date, User access, Web experience, and Web experience URL. The application is in 'Created' status with a 'Deploy' button. The footer includes 'CloudShell', 'Feedback', and copyright information.

The screenshot shows the IAM Identity Center console. The navigation bar is identical to the previous screenshot. The main header indicates 'IAM Identity Center > Groups > CareerCoaches'. A 'Did you know?' banner provides information about assigning permissions. The 'CareerCoaches' group page has a 'Delete group' button and an 'Edit description' button. The 'General Information' section shows the group's details. The 'Users' tab is active, displaying 'Users in this group (2)'. A message states: 'Workforce users in this group inherit permissions to the AWS accounts and Identity Center enabled applications that are assigned to this group.' Below this, a search bar is provided. The table lists two users: 'career.coach.one' and 'career.coach.two', both with 'Enabled' status and email addresses 'qbusiness@vocareum.com' and 'qbusiness_2@vocareum.com' respectively. The footer includes 'CloudShell', 'Feedback', and copyright information.

Section 2 – Create Application

Task 1 – Setup a basic application

• Step 1.1 – Create a basic application

- Step 1.2 – Add input cards for CV and Job profile uploads

- Step 1.3 – Add output card for Skill gap analysis

- Step 1.4 – Add output card for training recommendation

- Step 1.5 – Verify the application

Task 2 – Customize the application

- Step 2.1 – Add output card for schedule

- Step 2.2 – Add input card for Recommendation by Coach

Section 3 – Enhance your application

Task 3 – Use the existing data source to query course catalog information

- Step 3.1 – Access the already uploaded PDF course catalog in Amazon Q Business.

- Step 3.2 – Verify that your queries retrieve training recommendations from this source.

- Step 3.3 – Confirm that results from the course catalog are integrated seamlessly with other data sources.

List 10 training courses that come specifically from the newly uploaded training catalog documents in the data sources.

Only use information from the documents I uploaded, not general knowledge.

Based on the training catalog documents, here are 10 courses available:

1. Design and Analysis of Algorithms (CSD319) - A major core course offered by the School of Engineering's Computer Science and Engineering department. [1]
2. Introduction to Database Systems (CSD317) - A major core course from the Computer Science and Engineering department requiring CSD102/201 as prerequisites. [1]
3. Data Mining and Warehousing (CSD455) - A course offered by the School of Engineering's Computer Science and Engineering department. [1]
4. Tai Chi and Qigong for Prevention and Treatment of Chronic Conditions - Advanced Level (SCSK 588) - A core course focusing on creating treatment plans using Tai Chi and Qigong. [2]
5. Eastern Arts For Step 1 (SCSK 589) - A course consisting of 20 hours of workshop training on ZOOM. [2]
6. Narrative Medicine (SCSK 584) - A one-credit extracurricular course that uses components like close readings of fiction, clinical case studies, and reflective essays. [2]
7. Yoga & Meditation as Integrated Medicine-Advanced Level (SCSK 585) - A selective with 10 hours of workshop trainings on ZOOM. [2]
8. 3D Visualization techniques course - A course teaching basics of creating 3D visualizations using open source technology. [2]
9. Chemistry (CHEM) - A required course at SUNY Downstate Health Sciences University College of Medicine that includes General/Inorganic Chemistry and Organic Chemistry with labs. [3]
10. A course covering Transaction Management, Concurrency Control, and Recovery techniques for database systems. [1]

Amazon Q Business uses generative AI. You may need to verify responses for accuracy. [AWS Responsible AI Policy](#)

Section 4 – Tap into additional course catalog

Task 4 – Add another data source

- Step 4.1 – Create an Amazon S3 bucket and upload a static course catalog.

Create bucket [Info](#)

Buckets are containers for data stored in S3.

General configuration

AWS Region
US West (Oregon) us-west-2

Bucket type [Info](#)

☒ **General purpose**
Recommended for most use cases and access patterns. General purpose buckets are the original S3 bucket type. They allow a mix of storage classes that redundantly store objects across multiple Availability Zones.

☐ **Directory**
Recommended for low-latency use cases. These buckets use only the S3 Express One Zone storage class, which provides faster processing of data within a single Availability Zone.

Bucket name [Info](#)

Bucket names must be 3 to 63 characters and unique within the global namespace. Bucket names must also begin and end with a letter or number. Valid characters are a-z, 0-9, periods (.), and hyphens (-). [Learn more](#)

Copy settings from existing bucket - optional
Only the bucket settings in the following configuration are copied.

[Choose bucket](#)

Format: `s3://bucket/prefix`

Object Ownership [Info](#)

Control ownership of objects written to this bucket from other AWS accounts and the use of access control lists (ACLs). Object ownership determines who can specify access to objects.

Object Ownership

☒ **ACLs disabled (recommended)**
All objects in this bucket are owned by this account. Access to this bucket and its objects is specified using only policies.

☐ **ACLs enabled**
Objects in this bucket can be owned by other AWS accounts. Access to this bucket and its objects can be specified using ACLs.

Object Ownership
Bucket owner enforced

Block Public Access settings for this bucket

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to this bucket and its objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to this bucket or objects within, you can customize the individual settings below to suit your specific storage use cases. [Learn more](#)

☒ **Block all public access**
Turning this setting on is the same as turning on all four settings below. Each of the following settings are independent of one another.

- ☒ **Block public access to buckets and objects granted through new access control lists (ACLs)**
S3 will block public access permissions applied to newly added buckets or objects, and prevent the creation of new public access ACLs for existing buckets and objects. This setting doesn't change any existing permissions that allow public access to S3 resources using ACLs.
- ☒ **Block public access to buckets and objects granted through any access control lists (ACLs)**
S3 will ignore all ACLs that grant public access to buckets and objects.
- ☒ **Block public access to buckets and objects granted through new public bucket or access point policies**
S3 will block new bucket and access point policies that grant public access to buckets and objects. This setting doesn't change any existing policies that allow public access to S3 resources.
- ☒ **Block public and cross-account access to buckets and objects through any public bucket or access point policies**
S3 will ignore public and cross-account access for buckets or access points with policies that grant public access to buckets and objects.

Bucket Versioning

Versioning is a means of keeping multiple variants of an object in the same bucket. You can use versioning to preserve, retrieve, and restore every version of every object stored in your Amazon S3 bucket. With versioning, you can easily recover from both unintended user actions and application failures. [Learn more](#)

Bucket Versioning

☒ **Disable**

☐ **Enable**

Block Public Access settings for this bucket

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to this bucket and its objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to this bucket or objects within, you can customize the individual settings below to suit your specific storage use cases. [Learn more](#)

☒ Block all public access

Turning this setting on is the same as turning on all four settings below. Each of the following settings are independent of one another.

☒ Block public access to buckets and objects granted through new access control lists (ACLs)

S3 will block public access permissions applied to newly added buckets or objects, and prevent the creation of new public access ACLs for existing buckets and objects. This setting doesn't change any existing permissions that allow public access to S3 resources using ACLs.

☒ Block public access to buckets and objects granted through any access control lists (ACLs)

S3 will ignore all ACLs that grant public access to buckets and objects.

☒ Block public access to buckets and objects granted through new public bucket or access point policies

S3 will block new bucket and access point policies that grant public access to buckets and objects. This setting doesn't change any existing policies that allow public access to S3 resources.

☒ Block public and cross-account access to buckets and objects through any public bucket or access point policies

S3 will ignore public and cross-account access for buckets or access points with policies that grant public access to buckets and objects.

Bucket Versioning

Versioning is a means of keeping multiple variants of an object in the same bucket. You can use versioning to preserve, retrieve, and restore every version of every object stored in your Amazon S3 bucket. With versioning, you can easily recover from both unintended user actions and application failures. [Learn more](#)

Bucket Versioning

☒ Disable

☐ Enable

Tags - optional (0)

You can use bucket tags to track storage costs and organize buckets. [Learn more](#)

No tags associated with this bucket.

[Add new tag](#)

You can add up to 50 tags.

Default encryption [info](#)

Server-side encryption is automatically applied to new objects stored in this bucket.

Encryption type [info](#)

Secure your objects with two separate layers of encryption. For details on pricing, see [AWS S3 pricing](#).

☒ Server-side encryption with Amazon S3 managed keys (SSE-S3)

☐ Server-side encryption with AWS Key Management Service keys (SSE-KMS)

☐ Dual-layer server-side encryption with AWS Key Management Service keys (DSSE-KMS)

Bucket Key

Using an S3 Bucket Key for SSE-KMS reduces encryption costs by lowering calls to AWS KMS. S3 Bucket Keys aren't supported for DSSE-KMS. [Learn more](#)

☐ Disable

☒ Enable

Advanced settings

After creating the bucket, you can upload files and folders to the bucket, and configure additional bucket settings.

1. Screenshot of your final application, showing all the input and output cards.

The image displays two screenshots of the 'AI Career Coaching Assistant' application interface, showing the input and output cards.

Top Screenshot (Initial State):

- Header:** 'AI Career Coaching Assistant' with a subtitle 'Analyzes candidate CVs against job descriptions to provide skill gap analysis, training recommendations, and...'. Buttons for 'Add card', 'Share', and a menu icon are present.
- Left Sidebar:** Contains navigation links: 'Apps', 'Chat', 'Library', 'Feedback', 'Info', and 'Log out'.
- Main Content Area:**
 - Input Cards:**
 - Upload Candidate CV:** A file upload card with a dashed border and a 'Browse for files' link. File size limit is 50MB. File types: pdf, html, xml, xslt, md, csv, xls, xlsx, json, rtf, ppt, pptx, docx, txt.
 - Upload Job Description:** A file upload card with a dashed border and a 'Browse for files' link. File size limit is 50MB. File types: pdf, html, xml, xslt, md, csv, xls, xlsx, json, rtf, ppt, pptx, docx, txt.
 - Coach Notes (Optional):** A text input card with a placeholder 'Add any specific guidance or context to refine the recommendations'.
 - Output Card:**
 - Skill Gap Analysis:** An output card with a large empty space and a 'Run' button at the bottom.

Bottom Screenshot (After Running):

- Header:** Same as the top screenshot.
- Left Sidebar:** Same as the top screenshot.
- Main Content Area:**
 - Output Card:**
 - Skill Gap Analysis:** The output card now displays a message: 'Generating text as soon as Upload Candidate CV and Upload Job Description are filled'.
 - Training Recommendations:** A new output card is visible below 'Skill Gap Analysis', with a 'Run' button at the bottom.

2. Screenshot of your data sources, showing the last sync time.
